CONCEPT

↓ **Back to the future**

Every era places its own demands on office comfort. In today's world in which we mostly communicate online, it is necessary to keep in step with new technologies. For this collection, we therefore stepped back in time to find inspiration for the future. The TAK collection reflects this by encouraging and supporting both natural and mutual interactions within a team. The centrepiece is the conference table with benches on which people can sit next to each other to work, fraternize or take a break. It is an example of our desire to purposefully disrupt typical open plan offices by introducing new dimensions/ interventions that are focused on the human factor.

↓ **From individual comfort to collective needs**

As people, we are flexible, unique and have our own work space requirements. The TAK collection satisfies these various needs by providing an extensive and distinctive range of products, from work desks to shared workstations, and from calm zones to “bar” seating.

↓ Fresh & Czech

The TAK collection is local through and through, from the initial designs, to the development of prototypes and final production. We are a family-owned company that employs skilled cabinet makers who work as much as possible with locally sourced materials to reverently create each item. Our philosophy is to revert to the use of traditional natural materials to create high-quality products.

↓ Timeless

Trends come and go. We pride ourselves on the use of timeless materials and the application of tried-and-tested carpentry. For example, traditional joints on a wooden shelf cabinet are complemented by the use of proven technologies and high-quality workmanship.

Conference, working and dining table

The TAK Table is a focal point in any office and provides everyone with the perfect opportunity to meet, talk, work and relax. This piece of furniture is the answer to modern work flexibility and the need to have a work space that supports personal communication and collective collaboration. Its shape and (material) design maintains an eye for detail, whilst guaranteeing maximum functionality and structural stability.

The solid wood legs and cable duct (black MDF) form the basis of the construction. The cable duct is accessible via removable panels set into the desktop. The cable duct, which runs along the full length of the table, can be used for connecting electrical appliances, or alternatively, as a storage compartment. The table is designed and constructed so that people can sit comfortably around it (sides and ends) with sufficient leg room and depth for laptops or easy dining.

Bench

We like to think differently. That's why the TAK collection includes office benches. You can sit, lie and save space with this bench. This traditional piece of furniture tests team interactions. The question is: Who will sit in a chair and who will sit next to who on the bench?

Height adjustable desk

Do you spend long hours in front of your computer and can't find a comfortable sitting position? Then stand up. This height adjustable desk has built-in electric motors which enable the desktop to smoothly move up and down. You can choose from a basic desk, a desk with height adjustable legs, and with or without integrated draws for additional storage space. The advantage of this model is that the electric motors are hidden.

Shelving system

This shelving system divides and connects at the same time. In an open plan office, shelves can serve as storage, but also as a visual division of space. The elementary system of wooden prisms is based on side columns connected by shelves. What makes this shelving system unique is that it requires no screws and no tools. Instead, innovative carpentry has been applied to create decorative elements out of the joints. The basic module can be expanded both vertically and horizontally.
